

Vodacom lands 2Africa, the world's largest subsea cable, in EC

Vodacom has landed the world's largest subsea cable system, 2Africa, at its network facility in Gqeberha. This is the first submarine cable landing in the Eastern Cape region, 'promising greater internet capacity and acceleration of connectivity across the province and supporting South Africa's growing digital economy'.

The 2Africa Consortium includes eight international partners, China Mobile International, Meta (Facebook), MTN GlobalConnect, Orange, center3 (STC), Telecom Egypt, Vodafone/Vodacom and Wiocc, who have partnered to build 2Africa.

Launched in May 2022, the subsea cable project aims to significantly increase the capacity, quality, and availability of internet connectivity between Africa and the rest of the world.

The Gqeberha landing is the 2Africa project's third on the coast of South Africa, following two recent landings in the Western Cape by MTN GlobalConnect, Vodacom is the designated landing partner, providing facilities for the cable's installation at an existing site in the Summerstrand area.

"The cable system's landing in the Eastern Cape will also offer the potential for much-needed regional job creation in sectors that rely on direct international connectivity, such as data centres, call centres and software development. This employment opportunity can help contribute to local and national socio-economic development," Vodacom said.
