

Lamborghini's Aventador replacement engine info revealed

A few months ago Lamborghini pulled the plug on the Aventador. The V12 supercar will soon be replaced and today the Italian supercar maker released engine info on the Aventador's replacement.

The good news for ICE fans is that the Aventador's replacement will be powered by a V12 engine. However, the naturally aspirated unit will be mated with a trio of electric motors. It is being referred to as the brand's very first high-performance electrified vehicle – (HPEV). The aim of hybridisation is to reduce overall CO2 emissions by 30% when compared to the Aventador Ultimae.
