15 Jun 2022

European countries, scrambling to secure alternatives to Russian coal, imported 40% more coal from South Africa's main export hub in the first five months of this year than over the whole of 2021, figures obtained by Reuters showed on Wednesday, 15 June.

South Africa's Richards Bay Coal Terminal (RBCT) delivered 3,240,752 tonnes of coal to European countries by end-May this year, 15% of RBCT's overall exports, up from 2,321,190 (4%) in 2021, the figures showed.

Starting the second week of August, Russian coal imports will be banned in the European Union, part of wide-ranging sanctions on Moscow.

RBCT did not immediately reply to a request for comment. RBCT usually provides figures annually and does not give a comprehensive breakdown of export destinations.

African mining sector set for strong growth in 2022

Imports began since start of Russia-Ukraine war

The Netherlands, Italy, France, Spain, Denmark, Poland, Germany, and Ukraine have received coal from RBCT so far this year. Some of them only began importing from RBCT after Russia invaded Ukraine on 24 February.

The Netherlands received no coal from RBCT in January or February, but imported 1.27 million tonnes of coal from the terminal in March, April and May, with volumes increasing each month. It was the fourth top recipient of RBCT coal, accounting for 5.76% of total volumes.

France's coal imports from RBCT jumped nearly seven-fold, from just 68,005 tonnes over the whole of last year to 464,432 tonnes so far this year.

Spain, Poland and Germany did not import any coal from RBCT last year. In the first five months of this year, Spain has imported 355,250 tonnes, Poland 181,515 tonnes and Germany 157,383 tonnes.

Japan, which has also said it would ban Russian coal imports, received 388,249 tonnes of coal from RBCT since January, nearly double the tonnage it bought last year.

China, the third biggest importer of coal from RBCT in 2021 with 6.09 million tonnes, did not receive any coal from the terminal this year, the figures showed, reflecting China's increased imports of Russian coal.

Shortage of oil refineries haunts Africa as fuel prices rocket

Poor performance at RBCT

The surge in exports to Europe came despite a backdrop of poor performance at RBCT, underscoring the missed opportunity for South Africa as prices of the fossil fuel shot up.

Poor maintenance, a lack of locomotives, and copper cable theft have eroded South Africa's state-owned freight rail services which transport coal to RBCT and other ports. Some miners are using trucks to get their coal to port instead.

RBCT exported 22,057,587 tonnes of coal in the first five months of 2022. At that rate, RBCT will again see a drop in annual exports after its 2021 tonnages were the lowest since 1996.
